AskAI 1.0 cheat sheet: Claude Code, Codex, Antigravity, Cursor

Checked against vendor docs and independent benchmarks, 20 October 2026. Run `/help` after upgrades. Full guide: docs/ASKAI_GUIDE.md.

AskAI commands

ommand	
skai install --dry-run, then askai install --project <repo> (Windows: install.ps1 -DryRun, then install.ps1 -Project <repo>)	
url -fsSL https://raw.githubusercontent.com/aalokshah-business/AskAi/main/get.sh \	bash -s -- --target all --profile max --project <repo> --yes · Windows: & ([scriptblock]::Create(https://raw.githubusercontent.com/aalokshah-business/AskAi/main/get.ps1))) -Target all -Work askai upgrade`
skai todo (per tool and repository; askai todo done <id>) · every tool and why: askai plugins decisions	
skai help all · askai plugins info <id> (commands, checks, savings, off switch) · askai savings	
skai init <repo>: AGENTS.md router, CLAUDE.md, GEMINI.md, docs/ai/*, subagents for all four tools	
skai go claude --tier build "task" (codex, cursor, agy; lead, build, chore)	
skai prompt "..." --copy; noisy command: askai prompt --output-safe "cmd"	
skai work, askai etiquette, askai guide <moment>, askai ask <words>	
askai-handoff, then askai clear or askai break	
skai continue --copy (same as askai resume)	
skai infra, askai check, askai mcp	
skai audit, askai usage 7, askai report	
skai update, askai doctor, askai uninstall	

Commands to keep handy

Need	Claude Code	Codex CLI	Antigravity CLI	Cursor
What fills my context	/context	/status	/context	/context
Usage left, where it went	/usage (d/w)	/usage daily / weekly	/usage, /credits	Dashboard, Usage
New task, fresh chat	/clear	/new	/clear	/clear
Shrink a chat you must keep	/compact keep: goal, files, test	/compact	fresh chat + handoff	/summarize
Stop a wrong turn	Esc, /rewind	Esc, Esc Esc	Esc, /rewind	Esc, /rewind
Branch an idea	/rewind, retry	/fork	/fork	/fork
Plan before editing	Shift+Tab, /plan	/plan	/plan	/plan, /ask
Side question	/btw	/side	/btw	/ask
Lower thinking	/effort medium	Alt+,	/effort low	non-thinking model
Strong model only when needed	/advisor opus (Sonnet session)	Sol for the hard step	Pro for the hard step	frontier for the hard step
Unused tools off	/mcp	/mcp	/mcp	Settings, MCP
Handoff before a break	/askai-handoff	$askai-handoff	/askai-handoff	/askai-handoff
Resume later	/resume, claude -c	codex resume --last	/resume	agent --continue

Cheapest model first

Task	Claude Code	Codex	Antigravity	Cursor
Search, small edits, tests, docs	Haiku, low	Luna-class, low	Flash, low	Auto
Everyday features and fixes	Sonnet (Haiku if it copes), medium	Sol, medium	Flash or Pro, medium	Auto
Hard debugging, architecture	Sonnet + /advisor opus, high	Sol, high	Pro or Claude, high	frontier, no Max Mode

Habits that save the most

1. One task per chat; `/clear` between tasks. `/compact` is itself a big request.

2. One complete prompt (goal, files, how to verify) instead of drip-fed follow-ups. Edit and regenerate instead of correcting.

3. Name files with `@path`; search first, then read line ranges; batch independent reads in one message.

4. Plan first for multi-file work; give a test or command that proves it is done.

5. Ask for the smallest change that works; no unrequested refactors.

6. Paste only the failing function or the last 10–40 log lines.

7. Few subagents, on cheap models; no agent teams for routine work.

8. `CLAUDE.md` / `AGENTS.md` / `GEMINI.md` under 200 lines; MCP servers off unless needed; CLIs (`gh`, `rg`, `jq`) instead.

9. No speed or big-context modes: Claude fast mode, Codex Fast/Ultrafast, Cursor Max Mode. Unset `ANTHROPIC_API_KEY` / `OPENAI_API_KEY`.

10. Claude peak hours: weekdays 08:00–14:00 US Eastern (17:30–23:30 IST in US summer, 18:30–00:30 IST after early November).

Before a break

Finish the verified step, then commit or stash, then run `/askai-handoff` (Codex: `$askai-handoff`), then `askai break`. Stop `/loop`, `/goal`, teams and background agents, and note your reset time.

Coming back: `askai resume --copy` says whether to continue or start fresh and copies the prompt. The prompt: "Read AGENTS.md, then .ai-work/HANDOFF.md, then only the files it lists. Check them against git status and git log -1. Summarise in 6 lines, confirm the next step, and wait."

Not worth installing for savings

RTK (median +7% cost), Context Mode (+33% to +72%), Headroom (+32%), lean-ctx (+10%), proxies and routers (billing and data risk). AskAI installs what helps instead: Ponytail- and Caveman-style rules (–10% and –8%), LSP plugins with `--lsp` (–13%), ccusage for measurement.
